

Seal Skin Beaded Earrings Tutorial

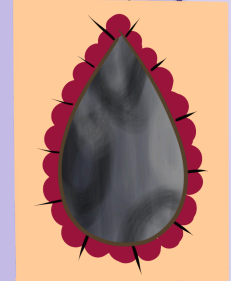

By: Julia Ogina

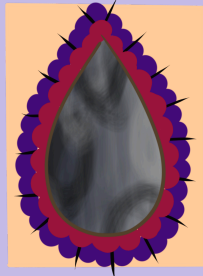

1.
 - A) Pickup beads to go around the seal skin cab
 - B) With the second needle, come up in the back with the second bead

- C) Stitch over the thread that has the beads. Do this after every second bead.
- D) Poke your needle in the back and tie a knot. You have completed row one.

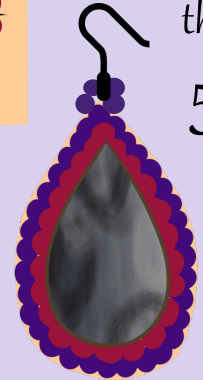

2. Add a second row of beads and follow the same steps. Use different colour beads.

3. Cut around the edge of your second row of beads. Do not cut thread.

4. With your final look, add the earring hook by stitching through with about 4-5 beads.

5. Go through the beads again with the thread to strengthen the hold of the earring hook.
Optional. If you have glue, you can glue material on the back to hide the stitches.
